

Project: SKY BIKE LANES

Making Metro Manila greener and safer for bikers

Integrating solutions in green transport and energy

Imagine Metro Manila where the air is cleaner, traffic is less chaotic, and you can bike safely anytime of the day (while producing green energy)? This project is built on that dream.

Massive urbanization demands innovative and integrated solutions. This proposed project recognizes that in order for cities to become more livable and sustainable, they should allow residents to enjoy more productive and leisure time rather than agonizing in massive traffic gridlocks. At the same time, societies should be able to benefit from green technologies such as renewable energies, enabling them to adapt to climate change as they fulfill sustainable development targets.

How can you help?

The realization of this dream begins with the conduct of a strong **feasibility study**.

You can help by:

- Responding to and sharing the link of our **survey** found at <http://goo.gl/forms/fAW4EQ2rfkBOGb143> and
- funding this study and/or referring us to possible donors who would like to support it.

What does the study cover?

Among other things, the study will calculate expected reduction in motorized traffic volume and GHG emissions as well as health and economic impacts that will hopefully be realized should the sky bike lanes be built.
